1 The Kuick Konqueror plugin

1.1 Introduction

Kuick offers a quick and easy way to copy or move files to another folder. Open the context menu with a right mouse button click on a file or a selection of files. Select Copy To or Move To to show a list with these options:

Home Folder Copy or Move the selection to the home folder or subfolders

Root Folder Copy or Move the selection to the root folder or subfolders

Contact To be written

Browse... Opens a dialog to choose a target folder or create a New Folder.

1.2 The Kuick KDE Control Center module

In the KDE Control Center select KDE Components → File Manager. Configure the options of Kuick on the Quick Copy & Move tab:

Check Show "Copy To" and "Move To" entries in context menu to enable the Kuick module.

In the sections Copy Operations and Move Operations you can set the number of the last cached folder with the spinbox Cache the last folders to a value between 1 and 6. Default is 5.

If you want to remove all cached entries, click on the Clear List button.
