# 1 The User Agent Changer

## 1.1 Using the User Agent Changer

The Konqueror uachanger plugin can be accessed in the menubar under Tools → Change Browser Identification

**Default Identification** The default User Agent header for Konqueror is Mozilla/5.0(compatible;Konqueror/3.2)(KHTML, like Gecko). If you come across a site that refuses this browser access, change your User Agent to one of the options below.

**Internet Explorer** Allows you to change your User Agent header to MSIE for sites that refuse Mozilla-based browsers entry. You will most likely need to use one of the MSIE User Agents if you wish to use Konqueror to access Hotmail.

**Mozilla** Allows you to change the User Agent header in Konqueror to appear as Mozilla version 1.2.1 through 1.6

**Netscape Navigator** Pages that don't comply with W3C recommendations, or were written using proprietary HTML elements and attributes will render correctly if you choose to send the User Agent of these old browsers.

**Other** This section contains miscellaneous browsers that you can use to change your User Agent.

**Apply To Entire Site** This option allows you to specify that the defined User Agent applies across every page on the site you are visiting.

**Configure** Selecting Configure allows you to fine tune the amount of information you wish to reveal about the browser and operating system being used.
