### **Abstract**

KLatin is a KDE application to help revise/teach Latin.

## Chapter 1

# Introduction

KLatin is a program to help revise Latin. There are three 'sections' in which different aspects of the language can be revised. These are the vocabulary, grammar, and verb testing sections. In addition there is a set of revision notes that can be used for self-guided revision.

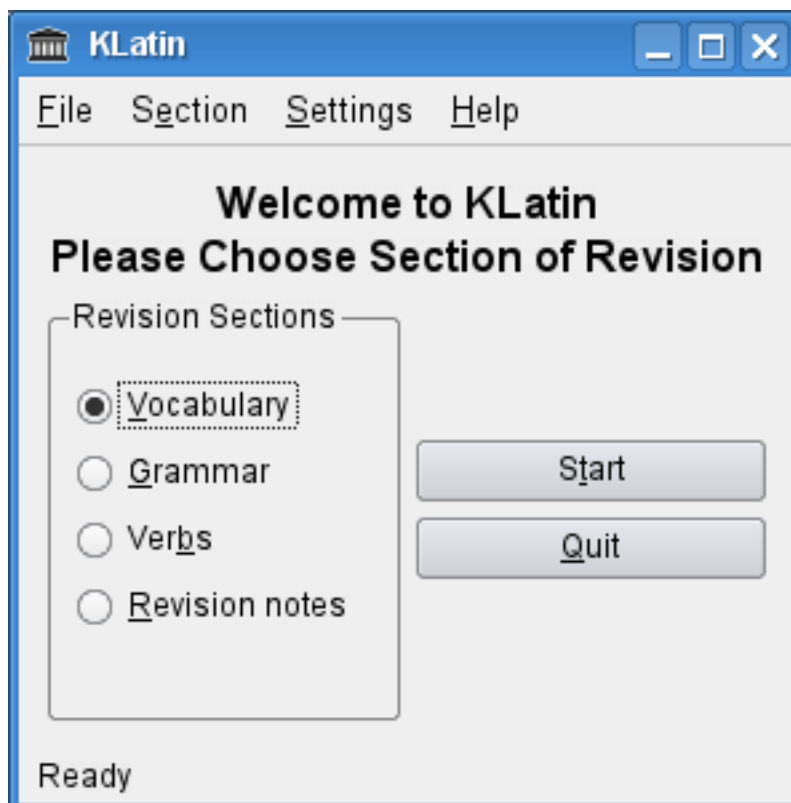

In the vocabulary section an XML file is loaded containing various words and their local language translations. KLatin asks you what each of these words translate into. The questions take place in a multiple-choice environment.

In the grammar and verb sections KLatin asks for a particular part of a noun or a verb, such as the 'ablative singular', or the '1st person indicative passive plural', and is not multiple choice.

## Chapter 2

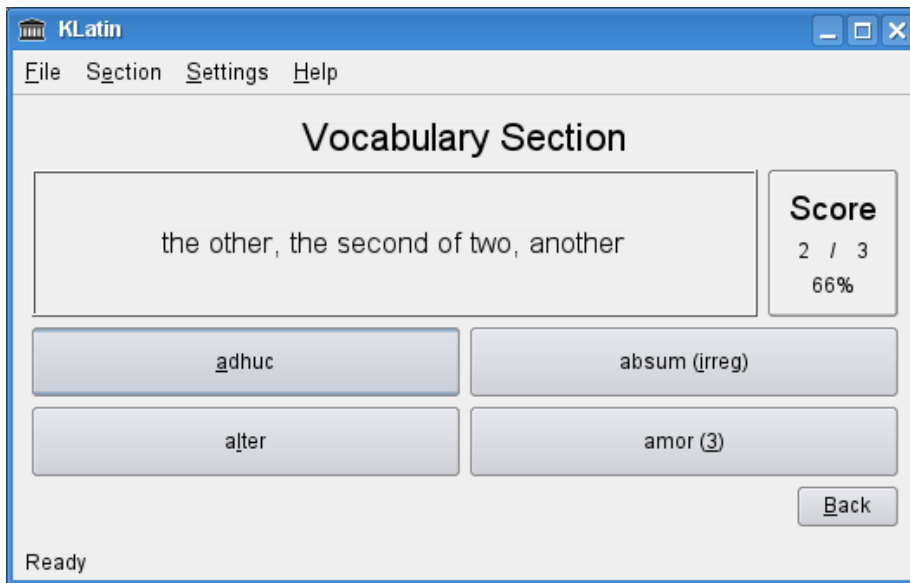

# Using KLatin

When you start KLatin, you are greeted by four options that you can choose from.

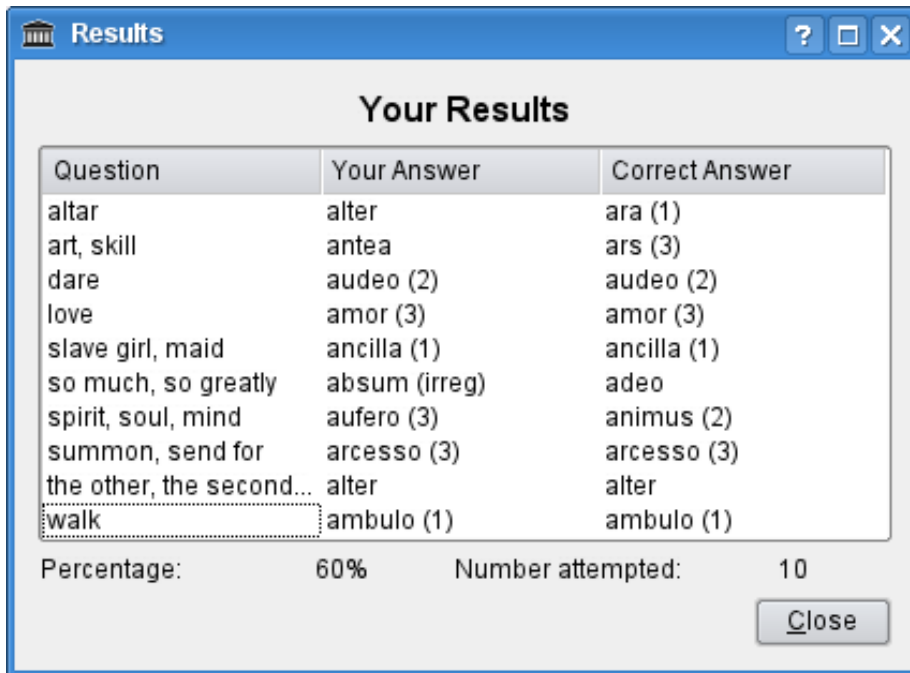

The first one, Vocabulary, is a multiple-choice vocabulary tester.

The KLatin Handbook

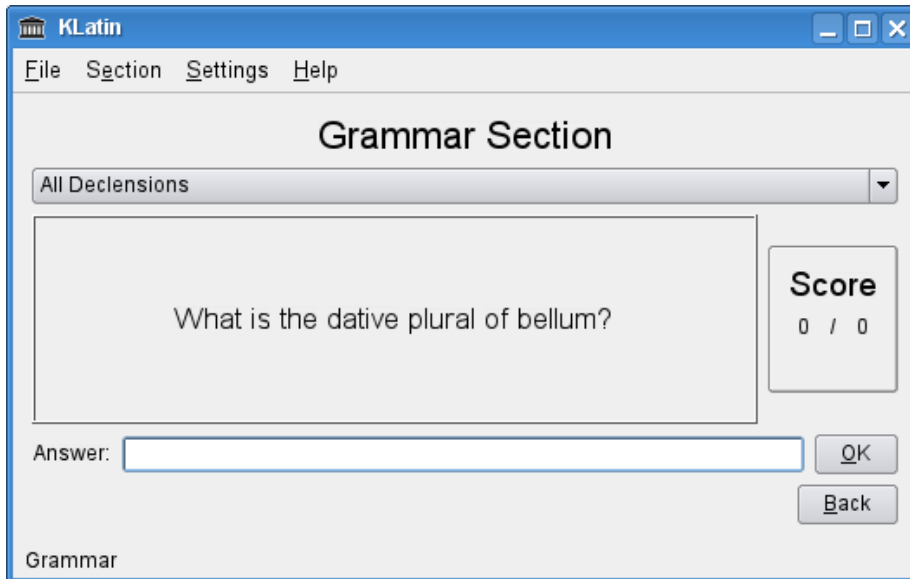

After you finish your test, a results screen is displayed.

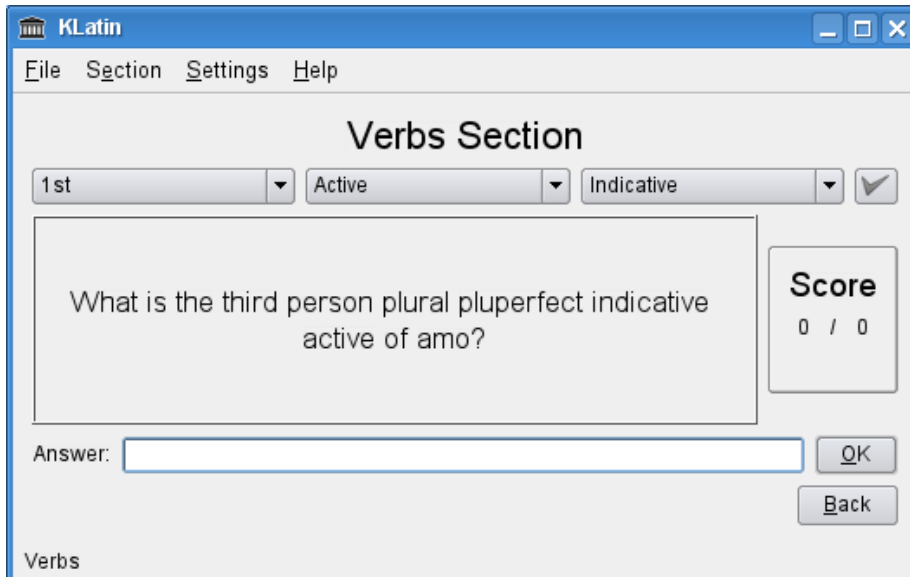

The second, Grammar tests you on grammatical parts of nouns.

## The KLatin Handbook

Verbs is almost the same as the Grammar section, except that it tests you on verb forms.

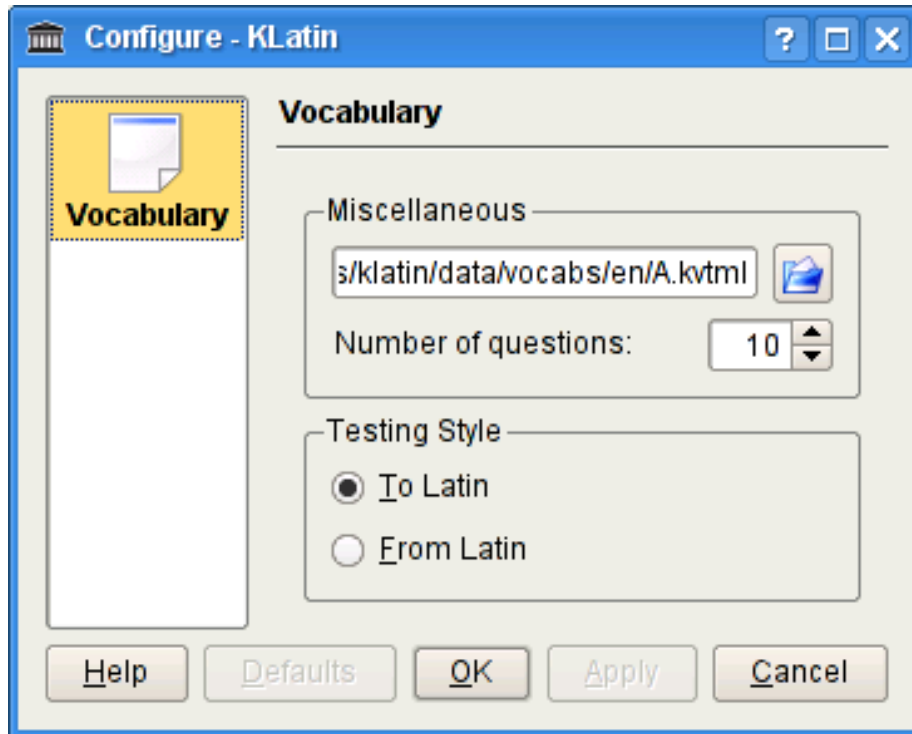

The fourth section, Revision notes, loads Konqueror into the KLatin revision notes section.

In addition to the options, you can also launch these sections via the menubar, in the Section.

The configuration dialog for KLatin can be accessed by choosing Settings → Configure KLatin... from the menu. In the Vocabulary page, you can set whether

## The KLatin Handbook

you want the test to take place from your language into Latin, or vice versa. You can also choose the default file which you want to use to test your vocabulary on, and you can also set how many questions you want to be tested on.

## Chapter 3

# The KLatin Main Window

The KLatin main window consists of four option buttons to choose which section to enter, and a menubar.

Choose from the Revision Sections list a section and click Start to start the chosen section.

When you are finished with that section, click Back to return to KLatin's main menu.

## Chapter 4

# Command Reference

### 4.1 The File Menu

**File** → **Quit (Ctrl+Q)** Quits KLatin

### 4.2 The Section Menu

**Section** → **Load Vocabulary** Loads the vocabulary section

**Section** → **Load Grammar** Loads the grammar section

**Section** → **Load Verbs** Loads the verbs section

**Section** → **Load Revision** Loads the revision section

### 4.3 The Settings Menu

**Settings** → **Configure Shortcuts...** Configure the keyboard keys you use to access the different actions.

**Settings** → **Configure Toolbars...** Not implemented yet.

**Settings** → **Configure KLatin...** Display the KLatin settings dialog

## 4.4 The Help Menu

**Help** → **KLatin Handbook (F1)** Invokes the KDE Help system starting at the KLatin help pages. (this document).

**Help** → **What's This? (Shift+F1)** Changes the mouse cursor to a combination arrow and question mark. Clicking on items within KLatin will open a help window (if one exists for the particular item) explaining the item's function.

**Help** → **Report Bug...** Opens the Bug report dialog where you can report a bug or request a 'wishlist' feature.

**Help** → **About KLatin** This will display version and author information.

**Help** → **About KDE** This displays the KDE version and other basic information.

## Chapter 5

# Translation Guide to KLatin

Only the vocabulary files have to be translated in your language. The vocabulary files use the KVTML format, which is the same as other programs such as KWordQuiz use. KWordQuiz is very useful as you can create the vocabulary files in that and load them directly into KLatin.

Below is explained how you can translate KLatin vocabulary files. At the moment, the files are only in English, German and Polish.

### 5.1 How To Translate KLatin vocabulary files

1. Get the latest KLatin code from CVS or a latest release. The words are stored in `source_dir_of_kdeedu/klatin/klatin/data/vocab/en/` in files like `A.kvtml` for Latin words beginning with A, `BC.kvtml` for Latin words beginning with B and C and so on.
2. Create a new subdirectory in `data/vocab/` named as your language code (for example, `fr` for French, `ja` for Japanese). Copy all the English vocabulary files there as well as the `Makefile.am`. Edit the `Makefile.am` and replace 'en' with your language code.
3. In `data/vocab/your_language_code`, edit all the files and translate the English words, i.e. those that are between the `<t>` and `</t>` tags.
4. Please send them to George [gwright@users.sourceforge.net](mailto:gwright@users.sourceforge.net).

## Chapter 6

# Developer's Guide to KLatin

### 6.1 Create new vocabulary files

The KLatin vocabulary database system is very easy to extend. Just look at the files and you'll understand! It uses the KVTML format, which is the same as other programs such as KWordQuiz use. So you can open KWordQuiz and use it to create the vocabulary files.

You can save your new files in the corresponding folder depending on what language they refer to in `.kde/share/apps/klatin/data/vocab/language_code/`. For example, English KVTML files are kept in a folder called `en`, German files in `de`, and so on. You can also send me your files so I can add them in the next KLatin release.

## Chapter 8

# KLatin notes

Welcome to the KLatin notes section. This is aimed to help you in your revision and covers the English GCSE syllabus (England).

Here are the different sections you can get help for:

- [Latin numbers](#)
- [Latin verbs](#)
- [Latin nouns](#)
- [Latin adjectives](#)
- [Latin pronouns](#)

### 8.1 KLatin Notes - Numbers

The Romans had a particular set of numerals and had names for each of their numbers. In this section are listed some numbers and their corresponding symbol.

### 8.2 KLatin Notes - Verbs

All languages have verbs. Latin verbs are divided into four categories, called *conjugations*. These conjugations are divisions of verbs that, generally, use the same stem formation and have the same endings.

The stem of a verb is the basic part of the verb that does not change. For example, the stem of *moneo* is *mone*. To get the stem of the verb, take the first person singular of the verb, and take off the -o ending. The verb 'sum' (I am) is totally irregular, and does not have a consistent stem.

### 8.3 KLatin Notes - Nouns

Nouns, like verbs, are divided into groups, called *declensions*. There are five declensions and three genders: masculine, feminine, and neuter.

The stem of a noun is the basic part of the noun that does not change. To get the stem of a noun, take the genitive singular of the noun, and take off its ending. For example: the stem of *puella* is *puell*; while the stem of *rex* is *reg*, because its genitive is *reg-is*.

#### 8.3.1 Latin Nouns

### 8.4 KLatin Notes - Adjectives

Adjectives are words to describe nouns, and so they agree with the nouns. Agreeing means that they match the noun they refer to in three ways: gender, number, and case.

### 8.5 KLatin Notes - Pronouns

Here are some pronouns.

# Appendix A

## Installation

### A.1 How to obtain KLatin

KLatin is part of the KDE project <http://www.kde.org/> .

KLatin can be found in the kdedu package on <ftp://ftp.kde.org/pub/kde/> , the main FTP site of the KDE project.

### A.2 Compilation and Installation

In order to compile and install KLatin on your system, type the following in the base directory of the KLatin distribution:

```
% ./configure
% make
% make install
```

Since KLatin uses **autoconf** and **automake** you should have no trouble compiling it. Should you run into problems please report them to the KDE mailing lists.
