KTorrent

KTorrent is a bittorrent application by KDE which allows you to download files using the BitTorrent protocol. It enables you to run multiple torrents at the same time and comes with extended features to make it a full-featured client for BitTorrent.

FEATURES

- Queuing of torrents
- Global and per torrent speed limits
- Previewing of certain file types, build in (video and audio)
- Importing of partially or fully downloaded files
- File prioritization for multi-file torrents
- Selective downloading for multi-file torrents
- Kick/ban peers with an additional IP Filter dialog for list/edit purposes
- UDP tracker support
- Support for private trackers and torrents
- Support for μ Torrent's peer exchange
- Support for protocol encryption (compatible with Azureus)
- Support for creating trackerless torrents
- Support for distributed hash tables (DHT, the Mainline version)
- Support for UPnP to automatically forward ports on a LAN with dynamic assigned hosts
- Support for webseeds
- System tray integration
- Tracker authentication support
- Connection through a proxy
- Interprocess control via Dbus interface
