1.1 Appearance Tab

Here you can configure how icons on your desktop appear.

Standard font: This option can be used to change the typeface used on the desktop. Simply select your typeface from the dropdown box.

Font size: You can change the relative size of the text on the Desktop.

Normal text color: This option lets you select the color of normal (or unhighlighted) text.

Text background color: This option lets you select the background color of normal text. If left unchecked, the text has a transparent background. If selected, you can choose the color by pressing the button.

Underline filenames: Determines if file names are underlined on the Desktop.

1.2 Multiple Desktops

KDE offers you the possibility to have several virtual desktops. In this tab you can configure the number of desktops as well as their names. Just use the slider to adjust the number of desktops. You can assign names to the desktops by entering text into the text fields below.

If you enable Mouse wheel over desktop switches desktop then scrolling the wheel over an empty space on the desktop will change the the next virtual desktop numerically, in the direction you scrolled (either up or down).
