This is a module to configure essential paths for the Plasma desktop.

NOTE

Drives that are automounted at login cannot be used as paths. Such drives will be reverted to defaults during restart of Plasma.

Desktop path:

The Desktop folder contains all the files which you see in a **Folder View** widget on your desktop. The default path is usually `~/Desktop` but you can change here the location of this folder.

Documents path:

This folder will be used by default to load or save documents from or to.

Downloads path:

This folder will be used by default to save your downloaded items.

Videos path:

This folder will be used by default to load or save movies from or to.

Pictures path:

This folder will be used by default to load or save pictures from or to.

Music path:

This folder will be used by default to load or save music from or to.

If you change a path and click **Apply** a dialog appears where you can choose to move the content to the new folder or use the new folder without moving the files.
