This module allows configuring the time to **Keep history** for opened files and clean some tracking data. Use the **Clear History** drop-down button to make Plasma **Forget the last hour**, **Forget the last two hours**, **Forget a day**, or **Forget everything**.

Below, you can configure the range of applications for memorizing opened documents. Use the **For all applications** item to store all data, the **Do not remember** item to switch off storing data, or **Only for specific applications** item for fine-grained selection (clicking on the application item toggles its current mode).

Check the **Blacklist applications not on the list** item to switch off tracking for all applications that are not on the list.
