Abstract

This is the documentation for the System Settings module to customize the mouse cursor appearance.

This module allows you to select from a number of installed cursor themes. A preview of the cursor display is shown above the list box.

The features provided by this module may not be available on some systems. Your system may need to be updated to support cursor themes.

If you have additional cursor themes available, you can install and remove them using the buttons at the bottom of the list box. Note that you cannot remove the default themes.

Use the **Get new Themes** button to launch the **Get Hot New Stuff** dialog and download additional themes from the Internet.

Some themes allow to choose the cursor size using the combobox down to the right.

The size can be set to the **resolution dependent** or one of the sizes available for your theme.
