Desktop Theme

A preview of available themes is displayed in this dialog. Select a theme by clicking on it.

Use the **Get New Themes** button to download additional themes from the Internet or load a theme from file.

The **Remove** button is enabled only for custom themes.

NOTE

Since Plasma 5.6 it is no longer possible to edit and customize individual components or items in a theme.

The recommended tools to check, blend and test themes is the plasma-sdk package, the Plasma Theme Explorer specifically.

If the plasma-sdk package is installed on your system, a button appears hovering a theme preview and lets you start the Plasma Theme Explorer.
