Desktop Theme

A list of available themes is displayed in this dialog. Select a theme by clicking on an item in the list.

Use the **Get New Themes** button to download additional themes from the Internet or load a theme from file.

NOTE

Since Plasma 5.6 it is no longer possible to edit and customize individual components or items in a theme.

The recommended tools to check, blend and test themes is the plasma-sdk package, the Theme Explorer specifically.

For more technical information visit [this page](#).
