Abstract

Kanagram brings fun anagram puzzles to KDE.

Chapter 1

Introduction

Kanagram is a game based on anagrams of words: the puzzle is solved when the letters of the scrambled word are put back in the correct order. There is no limit on either time taken, or the amount of attempts to solve the word. Included with Kanagram are several vocabularies ready to play, with many more available from the Internet.

Chapter 2

Using Kanagram

Here is the screen that is presented on startup of Kanagram, showing the main interface to the application. Much of the window is taken up by the blackboard, where the puzzles are written onto, with the filing cabinet on the right containing application controls:

1. The Vocabulary Switcher (**PgUp** / **PgDown**) allows the user to quickly change the active vocabulary by clicking with the left mouse button on the arrows to advance to the next vocabulary or to return to the previously-played vocabulary.
2. In the center of the blackboard is the anagram puzzle to be solved.
3. This is the **Start Timer** (**Ctrl+S**) button, and allows you to start or stop scoring timer.
4. When the **Hint** (**Ctrl+H**) button is clicked, a short sentence will appear, describing the current word puzzle.
5. The **Reveal Word** (**Ctrl+R**) button solves the current word puzzle.
6. The Entry Box allows you to input your attempts to solve the current word puzzle.

The Kanagram Handbook

7. The Next Anagram (**Ctrl+N**) button lets you switch to the next guess.
8. This is the **Configure** button, which opens the **Configure** Kanagram dialog.
9. The **Help** button is special, in that it reveals 3 sub-buttons. These buttons are shown when the **Help** button is hovered over, and provide access to the **Kanagram Handbook** (this document), the **About Kanagram** and the **About KDE** dialogs:

10. Use the **Change mode** button to switch between 1 and 2 player mode.
11. The **Quit** button closes the application.

2.1 Playing a game

Now that you are familiar with the interface of Kanagram, lets play a game!

1. Using the Vocabulary Switcher, select the vocabulary theme that you would like to attempt. A word from this vocabulary will then be presented in the middle of the blackboard. Now, try and guess what word the jumble of letters represents.

TIP

If you cannot guess what the word is, press the **Hint** button to get some friendly advice from your friend in the filing cabinet:

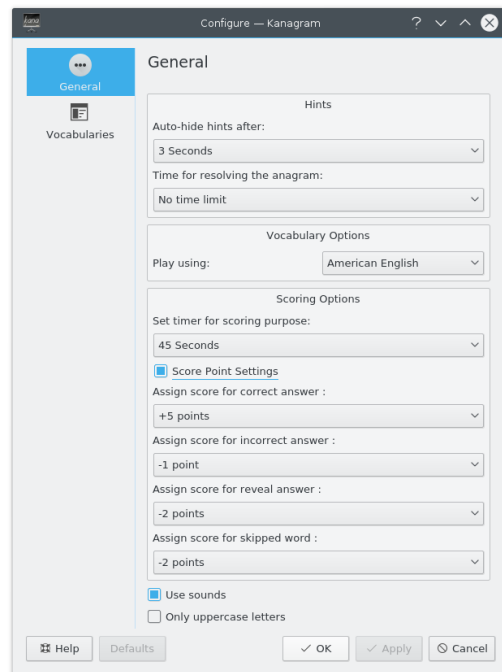

2. Once you think you know the correct answer, type the letters into the Entry Box below the blackboard or click them with the left mouse button and the letters move down to the entry box. If you were correct, the next anagram appears, otherwise all letters jump back into the blackboard.

Chapter 3

Configuring Kanagram

The **Configure** dialog is opened by clicking on the **Configure** button:

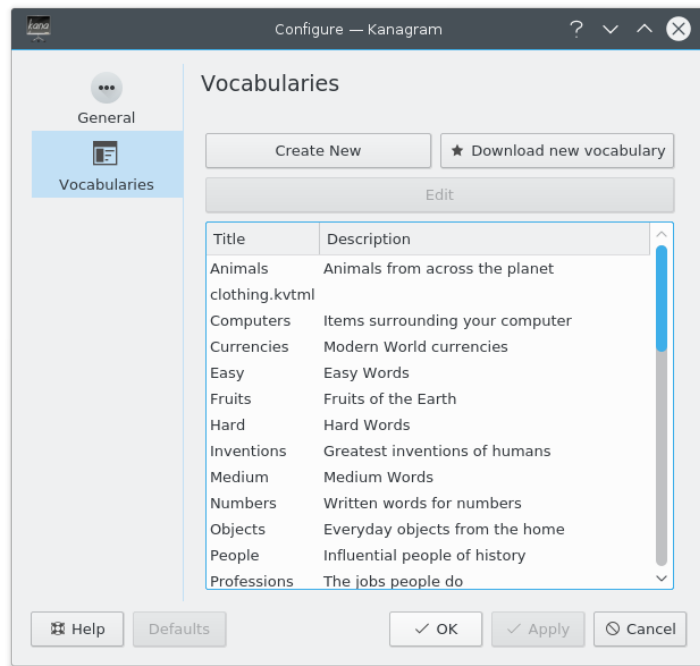

- The **Auto-hide hints after:** drop down box allows you to specify how hints are presented to you. Here, you can set the hint box to disappear after a certain amount of seconds (e.g. 5 seconds), or you can leave it as default ('Do Not Auto-Hide Hints').
- Use the **Time for resolving the anagram:** drop down box to specify the time you have to resolve each puzzle. By default there is 'No time limit'.
- The **Play Using:** drop down box allows you to play Kanagram using vocabularies of a different language. For this feature to work, you must have vocabularies of a separate language installed.
- The **Set timer for scoring purpose:** drop down box allows you to set in seconds the time interval of the score timer.
- The **Score Point Settings** checkbox can be used to reveal or hide options to configure scoring of answers.

The Kanagram Handbook

- The **Use sounds** check box allows you to either allow or suppress the Kanagram sound effects.
- The **Only uppercase letters** check box allows you to switch Kanagram to the uppercase only mode for words on the blackboard.
- The **Say correct words** check box allows you to turn off or on pronunciations. The audio files of the pronunciations should be included into the vocabulary being played or you should install and configure Jovie for this option to work.

3.1 Vocabularies

The **Vocabularies** configuration page allows you to manage your installed vocabularies. Using this dialog, you can edit and remove downloaded vocabularies, as well as create your very own:

- The **Create New** button opens the **Vocabulary Editor** dialog so that you can author your own vocabularies which you can then play.
- The **Edit** button allows you to make changes to vocabularies that you have either created or downloaded off the Internet.
- You can select which vocabulary you would like to apply these actions to by using the list of vocabularies.

3.1.1 Vocabulary Editor

The Vocabulary Editor allows you to create your own vocabularies, which Kanagram can then test you with:

The Kanagram Handbook

- The **Vocabulary Name** field lets you name your vocabulary.
- The **Description** field enables you to expand on your vocabulary name, providing your user with more details of the content of your vocabulary.

NOTE

Try to keep both the name and description fields as short as possible. Effective vocabularies cover a narrow, focused set of words for a single subject. Try to write at least 20 words for your vocabulary, so that it will not be quickly finished by the user.

- The **Remove Word** button lets you remove words from your vocabulary.
- The **New Word** button creates a new word entry in your vocabulary, ready for you to expand.
- The **Word** field lets you write word values into your vocabulary.
- The **Hint** field allows you to write hints to accompany your words.

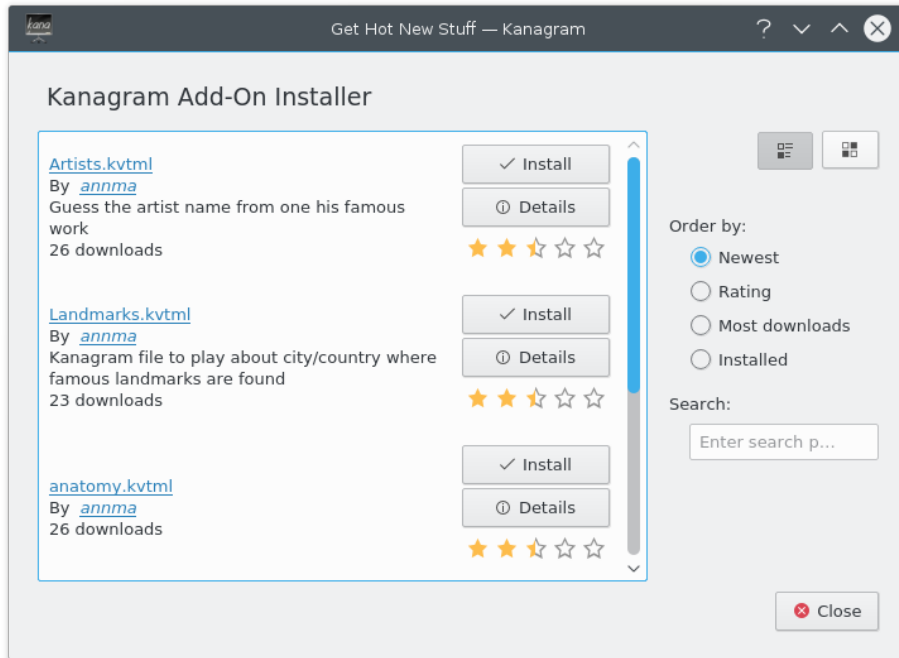

NOTE

Good hints clearly, yet subtly describe the word, whilst increasing the knowledge of the vocabulary subject for your user. Also ensure that your hints are fairly short (under 40 characters in length).

- The **Save** button saves your vocabulary content, and enables its use directly in Kanagram (it will immediately become available within the application, selectable via. the Vocabulary Selector).
- The **Close** button closes the **Vocabulary Editor** dialog without saving the content of your vocabulary.

3.2 New Stuff

The **Download new vocabulary** button on the **Vocabularies** configuration page allows you to obtain new vocabulary files from the Internet:

To install a vocabulary from the Internet, click on the vocabulary item in the list, then press the **Install** button to install to your system. The downloaded vocabulary will then be available to play immediately.

If you have already downloaded a vocabulary this button will change to **Uninstall** which allows you to remove a vocabulary.

To get more information about a vocabulary like the author, a description about the content and the changelog press the **Details** button.
