Abstract

KMix is an application that allows you to change the volume of your sound card.

Chapter 1

Introduction

KMix supports several platforms and sound drivers.

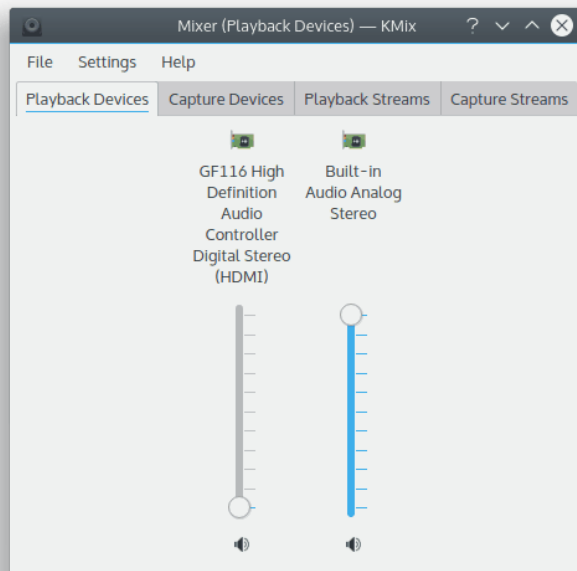

If you have both ALSA and Open Sound System drivers installed, KMix will use the ALSA driver.

Chapter 2

Main Window

Overview of KMix Main Window

2.1 File Options

File → **Hide Mixer Window (Esc)**
Hide Mixer Window

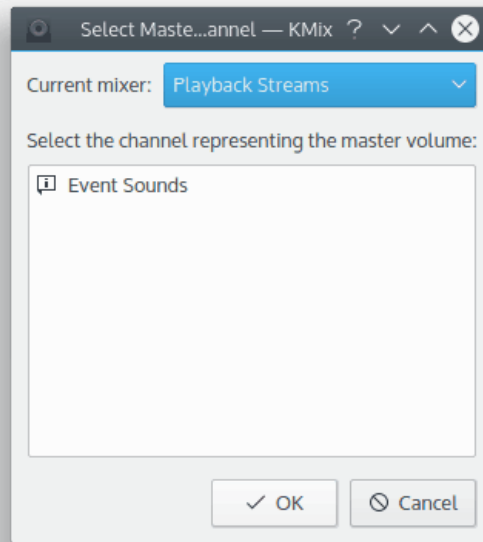

2.2 Settings

Settings → Audio Setup

Open [Phonon System Settings module](#) to configure the sound and video device preference and the backends used by KDE multimedia API, Phonon.

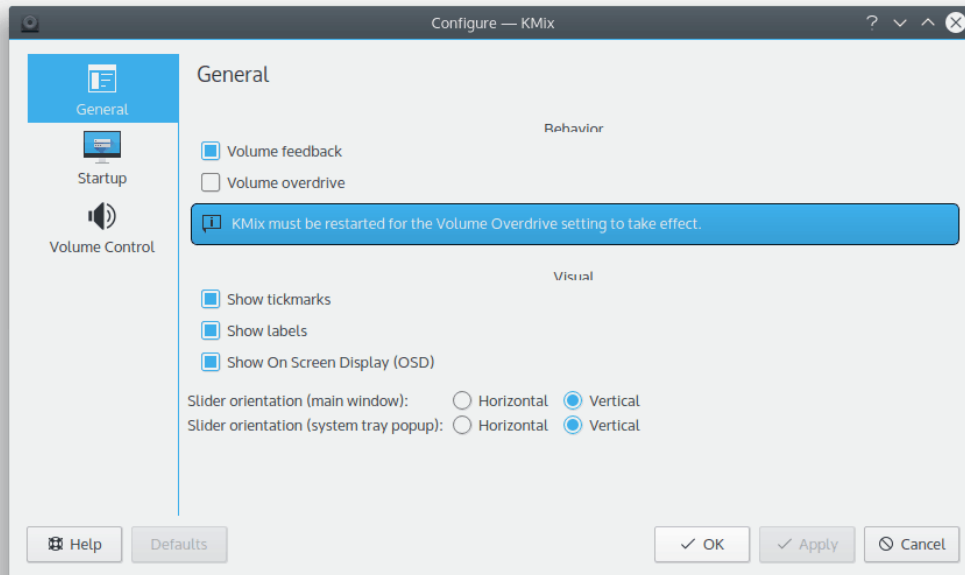

2.2.1 Select Master Channel

Select your KMix master channel.

2.2.2 Configure KMix

2.2.2.1 General configuration

Configure general KMix parameters.

Behavior → Volume Feedback

Check this box to enable audible feedback on volume change.

Behavior → Volume Overdrive

Check this box to allow volume to be more than recommended value (sometimes PulseAudio maximal volume exceeds the normal value). KMix restart is needed for this setting to take effect.

WARNING

Uncheck this item if there are audible sound distortions at the maximal volume.

Visual → Show tickmarks

Check this box to show tickmarks on controls.

Visual → Show labels

Check this box to show labels of controls.

Visual → Show On Screen Display (OSD)

Check this box to enable OSD show on hovering KMix tray widget.

Slider orientation (main window) → Horizontal

Check this radio button to orientate the control slider horizontally.

Slider orientation → Vertical

Check this radio button to orientate the control slider vertically.

Slider orientation (system tray popup) → Horizontal/Vertical

Same as the previous two radio buttons but for the system tray volume control (the panel that is shown after left mouse button click on KMix tray icon).

2.2.2.2 Start configuration

This page allows you to configure various KMix start parameters.

Startup → **Start KMix on desktop startup**

Check this box to enable KMix autostart with desktop environment.

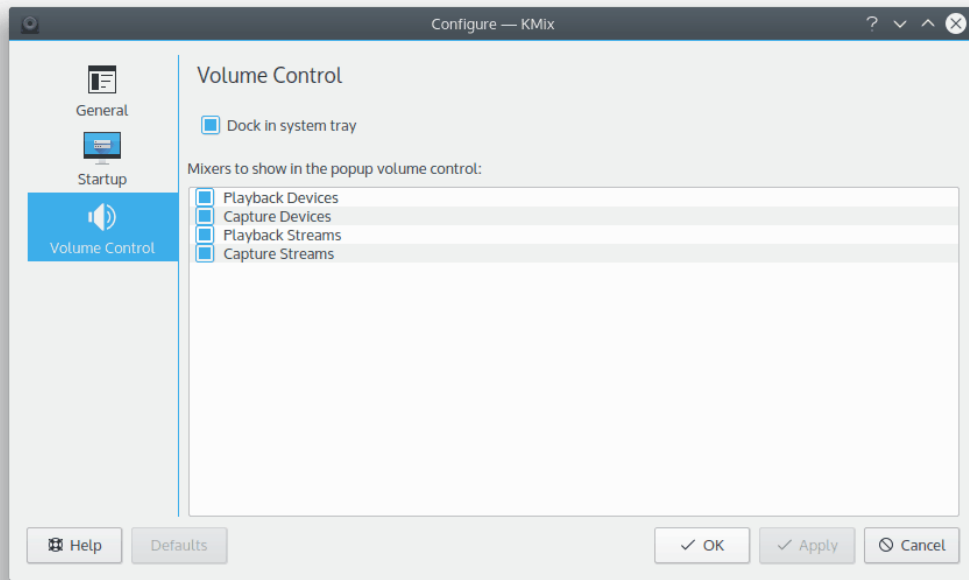

Startup → **Restore previous volume settings on desktop startup**

Check this box to enable volume levels and switches restoration to their last used settings on desktop start.

WARNING

The volume of PulseAudio or MPRIS2 dynamic controls will not be restored.

2.2.2.3 Volume control configuration

This page allows you to configure various KMix popup volume control parameters.

Dock in system tray

Check this box to dock KMix in system tray.

It is possible to select mixers that will be shown in the volume control using the corresponding list on this page.

Chapter 3

Advanced usage

3.1 Remote controlling and scripting via D-Bus

You can control KMix via D-Bus. This is for advanced users who want to achieve special tasks, like muting the PC every day at 10 pm, or for any other scripting task.

List all KMix related D-Bus methods and properties

```
qdbus org.kde.kmix
```

Getting volume level (0-100%):

```
qdbus org.kde.kmix /Mixers/0/Master_0 org.freedesktop.DBus.Properties.Get ←  
org.kde.KMix.Control volume
```

Setting volume level (0-100%):

```
qdbus org.kde.kmix /Mixers/0/Master_0 org.freedesktop.DBus.Properties.Set ←  
org.kde.KMix.Control volume 70
```
