ldap
ldap

ldap is the lightweight directory access protocol. It provides access to an X.500 directory, or to a stand-alone LDAP server.
You can use the ldap kioslave as follows:

```
ldap://host:port/ou=People,o=where,c=de??sub
```
for a subtree-query

or

```
ldap://host:port/cn=MM,ou=People,o=where,c=de??base
```
for a complete branch.
